Abstract:- This survey paper targets current situation in manual rummaging and brutal results related with it. It likewise incorporates mechanical arrangement as a Venture Named Forager. The prime thought process of this examination paper is to take out Manual Rummaging Utilizing Innovation. The extent of this paper is to bring this Antiquated Barbaric Conduct into spotlight and propose intends to annihilate it. It reasons that the disfavour connected to manual rummaging and the mortifying behaviour in itself are demonstrates of the disappointment of the communism of the pioneers and of the general population everywhere and along these lines the paper exhibits the need of a social change through age of mindfulness and strict execution of innovation so as to meet the limitation of good practice in which this battle presently lives. The primary portion of this paper will explicitly concentrate on India's present situation and the later half will endeavour to give mechanical understanding into this. The innovation of Forager utilizes basic electromechanical segments which works like a mechanized gadget and cleans the Sewer vents without manual application. The Forager is planned remembering the surface geometry of the sewer vents and takes a shot at the standard of Archimedes Screw which are utilized for dewater or for exchanging water from low-lying waterway to upper surfaces.

Keywords: Manual Scavenging, Scavenger, Society.

1. INTRODUCTION:

“I may not be born again but if it happens, I will like to be born into a family of scavengers, so that I may relieve them of the inhumane, unhealthy and hateful practice of carrying night soil.” - Mahatma Gandhi

ON 26th JANUARY 1950, the Constitution of India came into power, with this the Laws of social equality assurance and the wellspring of position and class destruction i.e., article 17 (abrogation of inapproachability) likewise came into power. Sadly, the soul of article 17, Constitution of India, was followed on a fundamental level as opposed to practically speaking. A plenty of enactments like Assurance of Social liberties Act, 1955, Timetable Stations and Calendar Clans Demonstration of 1988 and so on., were sanctioned to guarantee a fair and casteless society, however the state of the flimsier segments has neglected to hint at tasteful enhancement. Indeed, even today station remains a noteworthy wellspring of word related and class division. At the point when the world has gained critical ground in human advancement, in India there exist a network which make its living via conveying human excreta and overhauling the network sanitation with a stuff of their standing personality. They have additionally appropriate to live with pride as ensured under our constitution. According to Article 46 of the Indian Constitution, it is the obligation of the state to secure the more fragile segment of the general public yet it has neglected to do as such for these manual foragers and their recovery. Focal Government ordered a law on Work of Manual Foragers and Developments of Dry Lavatories (Restriction) Act, 1993 and The National Commission for Safai Karamcharis Act, 1993 however those were not appropriately executed rather not in any way. Seeing this dehumanizing routine with regards to manual scavenging and disappointment of existing law, Focal Government ordered another law called The Preclusion of Work as Manual Foragers and their Restoration Demonstration, 2013 on September 18, 2013. Three angles are basic to comprehend and address the predicament of manual foragers. These incorporate, their distinguishing proof, freedom and recovery. Numerous activities have been taken by common society association just as the Govt. be that as it may, the issue of manual rummaging has not been handled viably. On the off chance that the past endeavors have neglected to get the most extreme outcomes, at that point there is a need new systems to quicken the procedure of progress.

2. WHAT IS MANUAL SCAVENGING?

Manual rummaging incorporates clearing night soil in the city (dry excreta) i.e., the toilets without current flush framework, trailed by cleaning of water borne toilets. It additionally incorporates expulsion of bodies and dead creatures pursued by sewerage clearing, and conveying night soil by container/can or on head. The Scavengers creep into the dry excreta and gather the human excreta with exposed hands, convey it as head-load in a compartment to arrange it off. The arrangement of building open toilets and utilizing individuals to expel excreta was presented amid English principle in India, when regions were comprised. That time, frequently compartments were utilized in such toilets that should have been purged every day. After the development of flush sort toilets, every single other kind of toilets vanished from the western world. Be that as it may, this coldhearted practice proceeds in many creating nations including India. The sociocultural and monetary substances of present day India uncover a progression of oddities. While legitimately manual scavenging is prohibited, station politically-sanctioned
racial segregation and neediness sustain this training. In India, manual scavenging is a rank based occupation done by dalits. The manual Scavengers have diverse rank names in various pieces of the nation: Bhangis in Gujarat and Uttar Pradesh, Phakis in Andhra Pradesh and Sikkikars in Tamil Nadu. These people group are constantly put at the base of the station order just as dalit sub-position chain of importance. Refusal to perform such manual assignment prompts physical maltreatment and a social blacklist. Manual foragers are presented to the most harmful types of viral and bacterial diseases that influence their skin, eyes, appendages, respiratory and gastro-intestinal frameworks. Manual rummaging still gets by in parts of India without legitimate sewage frameworks. It is believed to be most predominant in Gujarat, Madhya Pradesh, Uttar Pradesh, and Rajasthan. A few districts in India still run open dry-toilets. The greatest violator of this law in India is the Indian Railroads which have toilets dropping all the excreta from trains on the tracks and they utilize foragers to clean it physically.

3. REVIEW OF MANUAL RUMMAGING IN INDIA:

Manual scavenging is said to have begun in 1214 in Europe when the primary open toilets showed up. The water wardrobe was developed by John Harrington in 1596. In 1870, S.S. Helior Imagined the flush kind can, and it ended up regular in the western world. This made different sorts of toilets vanish in the western world. Every single surface can were deserted in Western Europe in mid-1950s. Along these lines, India is the main nation on the planet where a specific Segment of the general public is customarily in charge of keeping the residence clean by expelling the waste results of the general public including the human excreta. Manual rummaging still gets by in parts of India without appropriate sewage frameworks. It is thought to be most pervasive in Gujarat, Madhya Pradesh, Uttar Pradesh, and Rajasthan. A few districts in India still run open dry-toilets. The greatest violator of this law in India is the Indian Railroads which has toilets dropping all the excreta from trains on the tracks and they utilize Scavengers to clean it manually.6

According to financial station statistics report (2011), Maharashtra has 63,713; Madhya Pradesh has 23,093; Uttar Pradesh has 17,619; Tripura has 17,332; Karnataka has 15,375 manual foragers. In any case, the precise number of manual Scavengers living in India is as yet an open finished inquiry. An arbitrary overview directed by Activity Help in 2002 out of six states – Madhya Pradesh, Andhra Pradesh, Orissa, Uttar Pradesh, Rajasthan and Bihar – guaranteed that Manual foragers were discovered dealing with something like 30,000 dry toilets. The overview likewise called attention to that, these foragers face serious segregation even from other dalits.4 The National Commission for Safai Karmchari, a statutory body, has brought up in its reports that the utilization of dry lavatories and proceeding with work of manual Scavengers by different divisions of the administration of India, especially in the offices like the railroads, protection and service of industry. The Work of Manual Foragers and Development of Dry Restrooms (Disallowance) Act, 1993 rebuffs the work of Scavengers or development of dry nonflushed lavatories with detainment for as long as one year as well as the fine of Rs 2,000. Guilty parties are likewise subject to arraignment under the Planned Positions and Booked Clans (Counteractive action of Privileged) Act, 1989. Given the high predominance of the illicit practice, the legislature of India propelled a national plan in 1992 for recognizing, preparing and restoring safai karmchari and appropriated generous assets for this reason. The Rajiv Gandhi Mission for Sanitation and Water Supply Plan presented by the service of rustic advancement goes for changing over dry restrooms into wet water-borne clean lavatories and restoring the freed foragers in option occupations.5 Be that as it may, it has been seen that, despite the fact that Scavengers are prepared and helped for taking up elective occupations, some of them again returned to manual rummaging. Rummaging does not require any ability and gives some extra pay no challenge, venture and hazard. These highlights combined with the requirement for cleaning dry lavatories and an absence of choices, constrain the foragers, especially ladies, to proceed in this occupation. It has likewise been discovered that in specific cases, Scavengers additionally face a trouble in taking up different occupations like running shops because of the overarching social biases.

4. SIZE OF THE ISSUE:

In spite of the fact that since quite a while ago prohibited, the act of manual scavenging proceeds in many states. Those working secretly are paid less for each house they clean. In numerous networks, in return for remaining sustenance, foragers are likewise expected to evacuate dead creature cadavers and convey messages of death to the relatives of their upper-rank neighbours. Their refusal to do as such can result in physical maltreatment and alienation from the community. Further the quantity of people utilized as foragers is unsure on the grounds that no dependable benchmark information is accessible. Truth be told, As indicated by the evaluation of Walk 1991 there were relied upon to be 4 lakh manual Scavengers among which 83% were observed to be in the urban regions and 35% of the foragers were observed to be ladies. As per the information given by the Service of Social Equity and Strengthening in Walk 2003, number has come to 6.76 lakh. Most of waste-pickers are ladies and children. A study directed by Safai Karamchari Andolan, a NGO development for the disposal of manual scavenging, uncovered that 98 percent of manual Scavengers in the state had a place with planned castes.[19] In January 2005, the Preeminent Court, hearing an appeal recorded in 2003 by the Safai Karmchari Andolan and 13 different associations and people, saw that the quantity of manual foragers in India has expanded. Indeed, even in Mahatma Gandhi’s Gujarat the circumstance is unfortunate. There are around 55,000 foragers in Gujarat, as per the Navsaran Trust, which has been driving the development in the State. Its author, Martin Macwan, trusts that it is difficult to decide effectively the span of the issue since individuals deny access to their homes. “We can think just about those utilized with the administration, nearby
municipal bodies or panchayats. The evaluations depend on the number of inhabitants in Balmikis, the kind of work they participate in, and test reviews," he says. "The State government does nothing aside from designate cash. The Scavengers are made to trust this is their work and they can't do whatever else, so they would prefer not to discuss it."

According to the Safai Karmachari Andolan, a movement to eradicate manual scavenging, at least 1,470 manual scavengers died at work between 2010 and 2017.

PAST CASES:
- September 17, 2018 | Another man dies while cleaning sewer pit in Delhi
- August 21, 2017 | Sanitation worker dies in Lok Nayak Hospital while cleaning a sewer line
- August 14 | Two workers cleaning a sewer line at a mall in Shahdara are killed
- August 7 | Three die in south Delhi’s Vasant Kunj while cleaning a sewer
- July 16 | Four labourers die after inhaling toxic gas in a tank in south Delhi’s Ghitorni
- August 10, 2016 | Man dies while cleaning septic tank in a Fatehpur Beri house

use of protective gear, which is allowed under the law.

4.1 Some real ramifications of manual scavenging:
- Expanding number of waste-pickers is viewed as an indication of developing neediness. Thusly Ideal to life of foragers stays under reliable danger.
- Appropriate to equity and nobility are abused because of the duration of such brutal practice.
- Right of Sustenance or ideal against Craving is disregarded because of continuation of the shrewd routine with regards to Scavenging.
- Manual foragers are presented to the most destructive types of viral and bacterial diseases that influence their skin, eyes, and appendages, respiratory and gastrointestinal frameworks. As indicated by the Natural Sanitation Establishment, Gandhi Ashram, most of Scavengers experienced iron deficiency, looseness of the bowels and heaving.
- Appropriate to improvement is additionally abused.

5. WHAT DOES ACT SAYS?

COIMBATORE: Despite the fact that the Demonstration prohibiting manual searching came into power in 2013, it has not been adequate to dispose of this underhandedness. Different associations engaged with endeavours to help manual foragers and restore them state that the legislature ought to uphold the demonstration in letter and soul. At exactly that point would we be able to prevail with regards to destroying this training and restoring exploited people. The Demonstration which was passed in the Parliament in 2013 bans utilizing of manual Scavengers and goes for their recovery by giving interchange employment. It is assessed that there are around 45,000 manual foragers in the state. This demonstration was gotten to substitute a before demonstration which was passed in 1993. The most recent act has increasingly stringent standards, however activists state this isn't satisfactory to address the difficulties looked in disposing of manual searching. Managers, including government offices and organizations, particularly nearby bodies that have utilized a substantial number of such individuals, have not been not kidding about settling the issue.

Activists assert that the legislature has not been not kidding about annihilating this wickedness. "The demonstration says that foragers ought to be supplanted with apparatus and innovation. In any case, the required machines have not been purchased. The wellbeing hardware including gloves isn't fit for use," said R Selvam, General Secretary of Ambedkar Manual Scavengers Worker's organization. Numerous associations including the enterprise keep on utilizing open barrels for moving waste which is dangerous.

In numerous pieces of India, the brutal routine with regards to manual rummaging keepon flourishing despite a law restricting it. In addition, the general population compelled to complete this debasing work stay undetectable to whatever remains of us, pushed to the edges of society. In light of over a time of research, Inconspicuous divulges the horridous predicament of manual foragers crosswise over 11 states while additionally recording their progressing battle for self-strengthening.

6. IN WHAT CAPACITY WOULD TECHNOLOGY BE ABLE TO HELP AND TRANSFORM SCAVENGERS INTO ENGINEERS.

Archimedes screw working principle:-
An Archimedes's screw, also known by the name the Archimedean screw or screw pump, is a machine used for transferring water from a low-lying body of water into irrigation ditches. Water is pumped by turning a screw-shaped surface inside a pipe. It consists of a screw (a helical surface surrounding a central cylindrical shaft) inside a hollow pipe. The screw in this case is turned by a geared motor. As the shaft turns, the bottom end scoops up a volume of water or other liquid. This water will slide up inside the spiral tube, until it finally pours out from the top of the tube. The screw is
usually used to move large volumes of water over short distances and heads. The contact surface between the screw and the pipe does not need to be perfectly watertight although, the better the contact consistency, the better the efficiency, most modern designs are very accurate to start with, but also take a short period to bed-in and reach maximum efficiency. Here, we have used Archimedes screw for transferring a semi-solid material from lower level to higher level vertically.

**Fig: Archimedes’s Screw**

**Working :-**

The scavenger, it comprises two activity:-

1. Horizontal to vertical movement:- this movement is done manually using handle connected to the outer cylinder assembly.
2. Up and down motion:-this motion is being carried out with the use of chain and sprocket arrangement.

The whole assembly consist of 2 cylinders

1) Inner cylinder :- this cylinder consist of screw (Archimedes screw) which rotates freely with the use of motor
2) Outer cylinder: this cylinder consist of inner cylinder and this cylinder provides support for movement of inner cylinder .

Outer cylinder is fixed on a frame and this frame is movable as per the requirement.

1) Initially the system is moved to the site or manhole where the work is need to be performed.
2) The outer cylinder is in horizontal position which is then brought back to vertical position using handle.
3) Then the outer cylinder is positioned properly upon the manhole.
4) Then with the help of motor the inner cylinder is moved in downward motion with the help of chain and sprocket assembly.
5) the inner cylinder is moved downward upto the level of slurry,
6) Then screw is rotated with the help of motor which creates the lifting force and due which slurry is lifted
7) The slurry due to the motion of screw lifts up and then poured in the collecting tank from outlet port present on the outer cylinder

**Fig. a: Model of Scavenger**

7. **CONCLUSION:**

Manual searching a station based and inherited calling, which is passed on, as a heritage starting with one age then onto the next; it has been a deep rooted everyday practice for this network, which is immaculate by mechanical headway in clean practices. What is more regrettable is the way that those conceived in this network are viewed as specialists of contamination because of their experience of social progressive system, in light of birth. They are the most mistreated and smothered class of Indian culture - detested, and stayed away from by every single other station and classes. The horrifying hardship, mortification and misuse they face, have no parallel in mankind's history. The training began in the Pauranic time frame proceeded in the Buddhist, Mauryan, Mughal tragically still proceeded. We as a whole are fortunate to observe and utilize innovation like cell phones and web yet an unavoidable issue again emerges, would they say they are extremely fortunate?

Its opportunity to look for help and let innovation transform those scavengers into engineers.

8. **REFERENCE:**

It is worth noting here that, Mahatma Gandhi raised the issue of the horrible working and social conditions of bhangis more than 100 years ago in 1901 at the Congress meeting in Bengal. Yet it took about 90 years for the country to enact a uniform law abolishing manual scavenging. See Bipin Chandra, India’s Freedom Struggle, Penguin.
